

RING SIZE GUIDE

HOW TO USE THIS GUIDE

- Check that the PDF is printed at 100% magnification to ensure accuracy.
- In order to get an accurate size, the sizer must be close fitting to your finger. Because of this, you may want to ask someone to help you size your finger for the best results.
- Measure your finger at the time of the day when it is at its largest – usually at the end of the day.
- Don't measure your finger when your hands are cold or damp, as they will be at their smallest.
- Be aware that rings or bands over 5mm in width may fit your finger more tightly than rings of the same size with narrower widths.

OPTION 1 CREATE YOUR OWN RING SIZER

- Cut out the ring sizer below.
- Wrap the sizer so it closely hugs your finger, and pull it taut by slipping the pointed end of the sizer through the slit.
- The number that lines up with the slit is your ring size.
- Note: quarter sizes are also available if you fall between a whole and half size.

OPTION 2 USING A STRING

- Cut a small piece of string or thread.
- Wrap it so it is comfortably hugging your finger and mark it with a pen, or cut the string.
- Compare your measurement to the ring size circles below.

OPTION 3 MEASURING A CURRENT RING

- Find a ring that fits the finger of the person you are sizing for.
- Lay the ring over each circle below until one lines up with the inside edge of the ring.
- If the ring falls between two sizes, you should order the quarter size in the middle.
